## (54) LUBRICATING OIL COMPOSITION

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To provide a lubricating oil composition having a long fatigue life by preventing a transmission from pitting, having an enough shudder-preventing performance for the transmission together with a performance of keeping the shudder-preventing performance for a long period, and therefore capable of especially suitably used for an automatic transmission and/or non-stage transmission.

**SOLUTION:** This lubricating oil composition is given by adding (B) calcium salicylate having a total base value of 50-300 mgKOH/g in an amount of 0.005-0.07 wt.% as a calcium element based on the total amount of the composition, (C) a sulfur and phosphorus-based extreme-pressure additive in an amount of 0.005-0.07 wt.% as a phosphorus element based on the total amount of the composition, (D) a specific succinimide compound in an amount of 0.1-6 wt.% based on the total amount of the composition, and (E) a boron-containing ashless dispersant in an amount of 0.001-0.05 wt.% as a boron element based on the total amount of the composition to (A) a base oil for the lubricating oil.

## LEGAL STATUS

[Date of request for examination] 01.10.2004

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
